

Suspicious Behaviour Detection For Production Printers

RETHINK WHAT'S POSSIBLE

Konica Minolta will help an important client in Central Europe to increase the protection of graduation and entrance exam tests and safety around production and industrial printers machines. The AI-based application can monitor all movement in the printing area and raise an alert in case of suspicious situations.

“Our solution can replace the work of the controlling operator, to make security more efficient and save costs. The whole system is fully in compliance with the GDPR regulation in Europe.”

Tomáš Slavíček, Innovation Competence Center Manager at Konica Minolta R&D

Detection of suspicious behaviour around production printing (PP) machines

Real-time alerting through MX Management Center

Daily report of any detected event for further processing by the customer

Perimeter security through the measurement of dwell time near to PP machines
