

KONICA MINOLTA

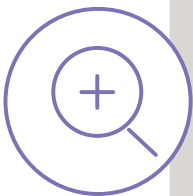

**COMPANY
NAVIGATOR**
HAVING RELEVANT INFORMATION
AT YOUR FINGERTIPS

Giving Shape to Ideas

COMPANY NAVIGATOR

your enterprise game-changing search platform

You know that piece of data you're looking for is somewhere. But you can't remember where.

- **Where is it stored?**
- **Who did it come from?**
- **Chat in Teams? Slack or Asana?**
- **Was it an email attachment?**
- **A document shared elsewhere?**
- **Is it stored locally, in your personal cloud, or in shared folder?**

How many of these problems are you facing daily?

From now on, you have Company Navigator: your enterprise game-changing search platform.

Seamlessly extracting meaningful information from any knowledge base, Company Navigator helps you find anything in the midst of exponentially growing digital data, even the documents you did not know existed.

Mapping the connections. Managing unstructured data.

Company Navigator leverages unstructured data from any enterprise knowledge base, gradually decreasing the need to organize data manually in a structured way.

It helps you find the way in complex company structures, by revealing hidden knowledge in relations between documents, people and actions. Based on contextual references, Company Navigator allows seamless insights and data-sharing across clusters, events, teams and locations.

Avoiding time-consuming and searching repetitive actions.

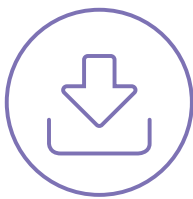

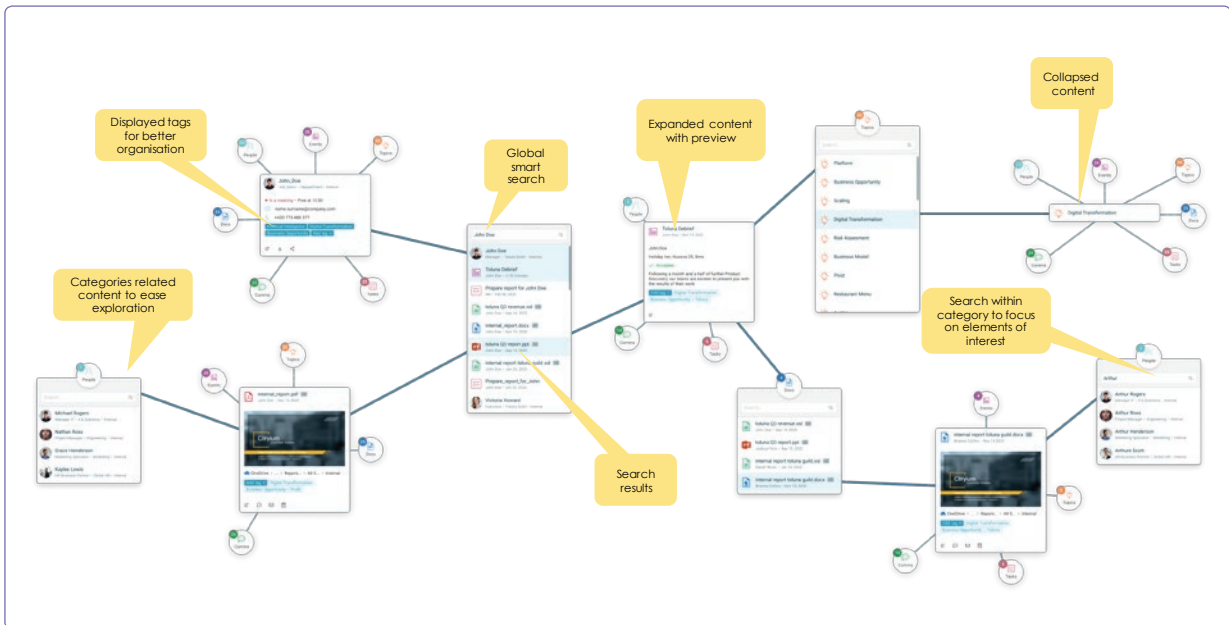

Company Navigator is a semantic services-based Teams Application that finds documents, people, events or categories relevant to your current tasks or interests. No matter if they are stored in clouds, e-mails, chats, collaboration apps or locally.

It keeps track of documents in complex storage, application and communication channel environment, typical for current digital workplaces.

It knows how to search and find. Even when you don't know where.

What makes the holistic search tool so powerful

- Konica Minolta’s Technology in Microsoft Teams
- Navigator’s algorithms and natural language processing are based on constant semantic analysis in the background.
- They utilize the know-how gathered over several years of Konica Minolta advanced document management research.
- The outputs are displayed to the user within Microsoft Teams environment in knowledge graphs with extensive visualization options.
- They are further enriched with inputs from Konica Minolta semantic services, which are being continually developed in our laboratories.
- Thanks to Company Navigator’s technologies, all the interdependencies between people, projects and documents are clearly and graphically visible with just a few clicks.
- Not quite the crucial inputs of a watercooler chat, with its “lateral knowledge” on who, what, how and when. But close.

Company Navigator App: Free and Premium version

You can install CN application from Microsoft Office Store as a basic Free Version that features core functionalities like explorative search and document relations visualization. Full functionalities are available in Premium Version: for pricing and purchase options please go to Microsoft Store.
